

[CloudOptix Announces MeghaWare Product Family at Cloud Connect 2010](#)

Santa Clara, CA, March 16, 2010 – CloudOptix comes out of stealth mode to announce its MeghaWare family of software products that consists of a unified cloud management application, a private cloud appliance and ultra low cost, public cloud services. CloudOptix will introduce and demonstrate MeghaConcierge, MeghaCenter and MeghaServices products at booth #308, Santa Clara Convention Center.

MeghaConcierge is a multi-vendor, hybrid cloud management application that gives users the freedom to select, connect and unify public/private/personal cloud services into a custom, best-of-breed, cloud computing solution. It currently includes support for Amazon S3 (**AMZN**), Eucalyptus Storage, Google Gdocs (**GOOG**), Microsoft Azure (**MSFT**), MeghaCenter Private Cloud and MeghaServices Public Cloud storage services. Future plans include support for additional storage and non-storage vendor cloud services. A free personal version will be available for download on our website as of March 31, 2010 and a premium business version will be available in Q2, 2010.

MeghaCenter is user-deployable, Amazon compatible, private cloud storage appliance software. In less than 5 minutes, a personal version of MeghaCenter can be installed on any Windows-based system -- with a single click. In less than 15 minutes, a business version with support for multiple users installs on a standard PC or custom OEM hardware and converts it into a standalone private cloud appliance. MeghaCenter private clouds can be easily deployed and configured for seamless MeghaConcierge unified management. The free personal version of MeghaCenter will be available for download on our website as of March 31, 2010 and a premium business version will be available in Q2, 2010.

MeghaServices are ultra low cost, public cloud based services that will be available during the second half of 2010. Please stay tuned for more information later this year.

CloudOptix, LLC is a privately held Florida-based software company. It is focused on developing simple, affordable, end-to-end, MeghaWare cloud computing products and solutions for End-Users, SMBs, OEMs and VARs that gives them the freedom to select public/private clouds, seamlessly connect and unify them into a personal cloud.
