

CloudOptix Demonstrates MeghaWare Software Products At Gov2.0 Expo, 2010

Washington, DC, May 27, 2010 –CloudOptix demonstrated its MeghaWare family of software products at the Gov2.0 Innovators Pavilion. In addition, we are exploring integrating future support for Gov2.0 clouds like the Nebula cloud. MeghaWare products consist of a CloudTop Application, Private Cloud Appliances, and Content Management Engines. Together, they make cloud computing **simple, secure** and **seamless** – enabling users to **dramatically** drive down computing costs and increase productivity!

MeghaConcierge is a unified cloud management application that can be installed on any Internet-enabled compute device -- to create a virtual CloudTop. Similar to a desktop on a PC, users can select, connect and unify public (Amazon **AMZN**, Atmos **EMC**, Google Docs **GOOG**, Microsoft **MSFT**, etc.) and private (MeghaCenter) clouds into a multi-vendor, hybrid cloud solution – with simple and familiar windows-like operations – point and click, drag and drop, etc. The CloudTop not only makes running internet-based software applications – from editing a document to creating a spreadsheet, from sending email to streaming video – amazingly easy but also liberates users from having to buy, install and upgrade expensive software and the required high-end hardware to run it! In addition, it gives users the freedom to access data from anywhere in the world, using any device and never having to worry about data loss due to failed, lost or stolen hardware prior to backup.

MeghaCenter private clouds are user deployable appliances that address public cloud internet availability, slow access speed and data privacy concerns. A user can easily setup a personal, virtual cloud appliance on any Windows PC -- with a single click. By simply pushing a button, users can add a secure private cloud to their MeghaConcierge CloudTop -- in less than 15 minutes. Standalone appliances will also be available from our partners and can be deployed by simply plugging them into the network and automatically discovering them from the CloudTop.

CloudOptix, LLC is a cloud virtualization software company that develops MeghaWare software products and solutions. The products include cloud management applications, private cloud appliances and content management engines. MeghaWare software gives users the freedom to select multi-vendor public/private clouds, seamlessly connect and unify them into a custom hybrid cloud solution to maximize productivity and savings. We focus on delivering simplified SMB cloud solutions and market enabling opportunities for VAR/OEM Partners. To learn more visit www.meghaware.com.
